

ANAND N

Software Engineer | Full Stack Developer | Python Developer

+91 7306922640 | anandanand6776@gmail.com | linkedin.com/in/anand-n-anand-n | github.com/900Gang | Kerala, India

Professional Summary

Computer Science Engineering graduate with a strong foundation in Python, full-stack development, backend development, SQL, REST APIs, and software engineering fundamentals. Hands-on experience developing Python-based applications using Django, working with JavaScript, HTML, CSS, React, databases, Git, and real-time data systems. Developed academic projects involving AI, IoT, backend development, cloud integration, and machine learning. Currently expanding knowledge in DevOps and Manual Testing. Eager to contribute to real-world software development and grow as a Software Engineer or Full Stack Developer.

Technical Skills

- **Programming:** Python, SQL, JavaScript
- **Web Technologies:** HTML5, CSS3, React
- **Backend & Frameworks:** Django, REST APIs, Node.js (Learning), Express.js (Learning)
- **Databases:** MySQL, Firebase Realtime Database
- **Version Control:** Git, GitHub, Git Workflow
- **Testing:** Manual Testing (Learning), SDLC, STLC, Test Case Design, Bug Reporting, Defect Life Cycle, Debugging, Agile
- **DevOps:** Linux, CI/CD, Virtual Machines, Docker (Learning), Jenkins (Learning), AWS (Learning)
- **Core Concepts:** Data Structures, OOP, DBMS, Operating Systems, Computer Networks, REST APIs, JSON, AI & Machine Learning, IoT

Projects

Early Identification of Learning Disabilities Using AI and IoT

Major Project

Technologies: Python, ESP32, Firebase, OpenCV, MPU6050, MAX30100

[GitHub Repository](#)

- Developed the Python backend for processing real-time physiological and behavioral data.
- Integrated ESP32 with MPU6050 and MAX30100 sensors using I2C communication.
- Implemented a real-time data pipeline to transmit sensor data to Firebase Realtime Database.
- Contributed to preprocessing multimodal sensor data for AI-based learning disability detection.
- Collaborated with a four-member team on system integration, debugging, testing, and deployment.

AI-Driven Clinical Support for Hematology Screening

Personal Project

Technologies: Python, TensorFlow, Keras, CNN, OpenCV

[GitHub Repository](#)

- Built a CNN-based deep learning model for automated blood smear image classification.
- Performed image preprocessing, normalization, and dataset preparation.
- Implemented an automated prediction pipeline using Python.
- Classified blood smear images into four categories: Normal, Anemia, Thalassemia, and Sickle Cell Disease.
- Evaluated model performance through iterative experimentation and testing.

Education

Bachelor of Technology (B.Tech) in Computer Science Engineering

2022 – 2026

College of Engineering, Muttathara

CGPA: 6.84

- Relevant Coursework: Data Structures, DBMS, Operating Systems, Computer Networks, Software Testing, Data Mining.

Higher Secondary Education (Class XII)

2018 – 2020

Sree Narayana Guru Higher Secondary School

CGPA: 8.8

Secondary Education (Class X)

2017 – 2018

Sree Narayana Public School

CGPA: 8.2

Certifications

- Python for Data Science — NPTEL
- Python Bootcamp — Udemy
- Basic to Advanced SQL — Skill Nation

Professional Skills

- Problem Solving | Communication | Team Collaboration
- Adaptability | Quick Learning | Critical Thinking | Time Management
